M SREERAM REDDY

Data Analyst | Data Engineer
sreeram2124@gmail.com | +91 6366633221 | GitHub | LinkedIn

Summary

Data Analyst and aspiring Data Engineer with strong expertise in **SQL**, **Python**, and **Power BI**, focused on building scalable **ETL pipelines** and transforming raw data into actionable business insights. Skilled in **data modeling**, **dashboard development**, and **cloud computing** (AWS, OCI).

Education

SRM Institute of Science and Technology Jun 2022 – May 2026
B.Tech in Computer Science (Big Data Analytics) CGPA: 9.01 / 10

Relevant Experience

AI & ML Intern *Sep 2023 – Oct 2023*
Kodacy (Remote)

- Engineered optimized **ETL data pipelines** in Python, reducing data processing latency by 35%.
- Designed interactive dashboards in Power BI to track KPIs, improving data interpretation efficiency by 40%.

Apprentice (Java Full Stack) *June 2026 – July 2026*
LTIMindtree, Navi Mumbai

- Developed reusable DAOs and JDBC connectors to streamline data integration for internal tooling projects.
- Designed and implemented database schemas in PostgreSQL for internal applications, ensuring data integrity and query optimization.
- Collaborated with cross-functional teams to gather requirements and deliver data-driven solutions for business operations.

Projects

Global Warming Analytics Dashboard – Power BI [GitHub]

- Engineered a comprehensive Power BI dashboard analyzing global temperature trends and carbon emissions using **DAX**.
- Implemented interactive filters and drill-down features for dynamic regional reporting and KPI analysis.
- Transformed and cleaned raw climate datasets using Python (Pandas) to ensure data accuracy and consistency.

FraudDetectX – Transaction Risk Analysis [GitHub]

- Performed **EDA** on imbalanced credit card transaction data to identify fraud patterns and class imbalances.
- Developed and tuned classification models (Logistic Regression, Random Forest) to enhance fraud detection accuracy.
- Built an interactive **Power BI dashboard** to visualize fraud trends and model performance metrics.
- Handled data preprocessing and feature engineering using Python to improve model prediction reliability.

Sales Analytics Dashboard (CRM Pipeline Analysis) [GitHub]

- Architected data pipelines using **SQL** and Python to extract, clean, and transform sales data for pipeline analysis.
- Developed dashboards to monitor conversion rates and revenue trends, identifying bottlenecks that improved lead strategies.

Technical Skills

Data Engineering & Analytics: SQL (PostgreSQL, MySQL), Python (Pandas, NumPy), ETL Pipelines, Data Modeling
Visualization & BI: Power BI, Excel (Advanced), Tableau, Dashboarding, DAX
Cloud & Databases: AWS, OCI, PostgreSQL, MySQL, MongoDB
Core Engineering: Java (JDBC, Collections), Linux, Git
Other: Statistics, Business Analysis, KPI Tracking, Forecasting

Certifications

- **Google Data Analytics Professional Certificate** Sep 2023
- **IBM Data Science Professional Certificate** Oct 2023
- **AWS Cloud Solutions Architect** Dec 2023
- **Oracle Cloud Infrastructure Foundations Associate** Jan 2024
